

PAILS (CONICAL)

Conical pails require two-thirds less warehousing space when empty. Pails can be completely emptied without leaving any residue. Sizes up to a diameter of 280 mm are delivered with 1 handle, from 328 mm diameter with a carrying-handle on either side. As closures we offer clamp-lids, lids with L-Ring or lids with a clamping-ring. In case of water-based contents, protection against corrosion is provided by varnishing and/or PET-coating on the inside.
